### CRITERIA FOR PASSING THE CNA COURSE

Nurse Aide Training Program (NATP) — In-Person and Hybrid Tracks

*Submitted for Regulatory Review*

#### I. Purpose

The following criteria establish the minimum standards required for student completion of the Certified Nursing Assistant (CNA) program offered by GA Healthcare Training & Consulting. These standards are designed to ensure that all program graduates possess the knowledge, clinical competency, and professional readiness necessary to deliver safe, effective, and ethical care in accordance with the Georgia Rules and Regulations governing nurse aide training programs.

GA Healthcare Training & Consulting offers the CNA program in two approved delivery tracks: an In-Person Track and a Hybrid Track. The academic, clinical competency, professional conduct, and record retention standards set forth in this document apply equally and without modification to both tracks. The two tracks differ only in the delivery method and distribution of required program hours, as specified in Section III.

#### II. Program Delivery Tracks

##### A. In-Person Track

All didactic instruction, skills laboratory instruction, and skills evaluation are delivered on site at the program's approved training location under the direct supervision of a qualified program instructor. Supervised clinical training is completed at an approved long-term care facility.

##### B. Hybrid Track

Didactic instruction is delivered through the program's instructor-monitored learning management system, with documented tracking of student participation, module completion, and time on task. All skills laboratory instruction, all skills competency evaluation, and all supervised clinical training are completed on site and in person under the direct supervision of a qualified program instructor. No portion of skills evaluation or clinical training is delivered online in either track.

#### III. Total Program Hours Requirement

Students must complete all required program hours for their enrolled track to be deemed eligible for a Certificate of Completion. All hours must be documented, verified by the supervising instructor, and maintained in the student's official program record in accordance with applicable Georgia regulatory requirements.

| Instructional Component          | In-Person Track | Hybrid Track | Delivery Method         |
|----------------------------------|-----------------|--------------|-------------------------|
| Classroom / Didactic Instruction | 27.5 hours      | —            | Instructor-led, on site |

| Instructional Component                    | In-Person Track   | Hybrid Track      | Delivery Method                                  |
|--------------------------------------------|-------------------|-------------------|--------------------------------------------------|
| Online / Asynchronous Didactic Instruction | —                 | 40.0 hours        | Learning management system, instructor-monitored |
| Skills Laboratory                          | 38.5 hours        | 34.0 hours        | On site, instructor-supervised                   |
| Supervised Clinical Training               | 24.0 hours        | 24.0 hours        | Approved long-term care facility                 |
| <b>Total Required Program Hours</b>        | <b>90.0 hours</b> | <b>98.0 hours</b> |                                                  |

Students who do not complete the total required hours for their enrolled track will not be eligible for program completion or for referral to the Georgia nurse aide competency examination. Absences must be made up in accordance with the program's Attendance and Make-Up Policy, and all make-up hours must be documented in the student record and verified by the supervising instructor prior to program completion. Clinical hours may not be waived, reduced, or substituted with laboratory or online instruction under either track.

#### IV. Academic Achievement Standard

Students must achieve a minimum score of 80% on all written examinations, quizzes, and program assessments, and a minimum cumulative average of 80% across the didactic component of the program. Assessments are administered throughout the program to evaluate student comprehension of required didactic content, including but not limited to residents' rights, infection control, safety and emergency procedures, communication, basic nursing skills, and person-centered resident care.

| Assessment                                 | Minimum Passing Score | Applies To         |
|--------------------------------------------|-----------------------|--------------------|
| Module Examination 1                       | 80%                   | Both tracks        |
| Module Examination 2                       | 80%                   | Both tracks        |
| Module Examination 3                       | 80%                   | Both tracks        |
| Quizzes and Knowledge Checks               | 80% cumulative        | Both tracks        |
| Comprehensive Final Written Examination    | 80%                   | Both tracks        |
| <b>Required Clinical Skills Competency</b> | <b>100%</b>           | <b>Both tracks</b> |

Students who fall below the 80% threshold on any assessment will be placed on documented academic remediation and must successfully retest before advancing to the next module of instruction. Continued failure to meet this standard may result in dismissal from the program. Examination integrity requirements apply identically to both tracks; all module examinations and the comprehensive final

written examination are administered on site and proctored by a qualified program instructor, regardless of the student's enrolled track.

## **V. Clinical Skills Competency Standard**

Students must demonstrate 100% competency in all required clinical skills prior to program completion. Skills competency is evaluated through direct observation by a qualified program instructor using standardized competency checklists aligned with the Georgia state-approved nurse aide core curriculum. The following conditions govern skills evaluation in both the In-Person and Hybrid tracks:

- All skills instruction and evaluation are conducted in person in the skills laboratory and clinical setting. Online instruction does not satisfy any portion of the skills competency requirement.
- Each required skill must receive formal instructor sign-off, documented on the student's official skills competency record, prior to advancement and program completion.
- All critical elements of each skill, including hand hygiene, resident identification, privacy, safety, and communication, must be performed correctly for the skill to be recorded as competent.
- Students who do not achieve competency on initial evaluation will be provided with a structured remediation opportunity and must successfully demonstrate competency upon retest before advancing.
- Failure to achieve competency following remediation may result in program dismissal.

## **VI. Professional Conduct Standard**

Students must demonstrate professional conduct consistent with the ethical and legal standards governing nursing assistant practice throughout the duration of the program. This includes adherence to the program dress code, compliance with facility policies during clinical rotations, maintenance of resident confidentiality in accordance with HIPAA, punctuality and attendance, and demonstration of respectful, person-centered care always.

For students enrolled in the Hybrid Track, professional conduct standards extend to the online learning environment and include academic honesty, individual completion of all assigned coursework and assessments, respectful communication within the learning management system, and adherence to posted module completion deadlines.

## **VII. Program Completion and State Examination Eligibility**

Students who satisfy all criteria set forth in Sections III through VI of these documents will be deemed program completers and will receive an official Certificate of Completion from GA Healthcare Training & Consulting. The Certificate of Completion does not distinguish between delivery tracks; graduates of both the In-Person Track and the Hybrid Track meet identical completion standards.

Upon verification of all completion criteria, the program will submit the student's information for eligibility determination for the Georgia nurse aide competency examination (NNAAP), administered by Credentia under contract with the Georgia Department of Community Health. Candidates who successfully

complete both the written (or oral) and skills components of the examination are listed on the Georgia Nurse Aide Registry, which is maintained by Alliant Health Solutions.

### **VIII. Record Retention**

GA Healthcare Training & Consulting will maintain all student academic records, skills competency documentation, program hour logs, learning management system participation records for hybrid students, attendance records, and remediation documentation in accordance with applicable state retention requirements, and will make such records available for regulatory review upon request.
